PIRON WORK SPACE

The owner’s control room

How to read the numbers, answer the queues, switch features and keep your own book. Part 2 of 2.

Owner only. Do not share.

Version of 16 October 2026 | app.piron.tech/admin/space
Owner account: leangporpo9@gmail.com
The first guide, Piron Work, is for everyone.

What is in this guide

1. What the Space is
2. How to open it
3. Overview
4. The queues
5. People
6. Marketplace
7. Errors
8. Features
9. Money
10. Reports
11. Audit log
12. Daily, weekly, monthly
13. Safety and limits
14. Problems and answers

1. What the Space is

Piron Work Space is a private area for you, the owner. It answers five questions:

Question	Section
How many people use Piron Work and what is new?	Overview, People
Is the marketplace actually working?	Marketplace
What is broken right now?	Overview status, Errors
Which new feature is hidden, and who can see it?	Features
How much came in and went out?	Money, Reports

Only the owner account can open it. Any other person, even another admin, sees “Not allowed” and receives no numbers. Everything you do in it is written to the audit log.

2. How to open it

1. Log in with the owner account. You land on a page with two cards: **Piron Work** (the app) and **Piron Work Space** (the control room). Choose the Space.
2. Later, click the **Piron Work logo** at any time to come back to the same two cards.
3. Inside the app, open the **Menu** (three lines) and choose **Piron Work Space**.
4. Or go straight to **app.piron.tech/admin/space**.

Moving around

The side list has Overview, People, Marketplace, Errors, Features, Money, Reports and Audit log. On a phone the list scrolls sideways. At the top, `Open Piron Work` goes back to the app and `Requests and applicants` opens the older admin page.

The Space is in English only.

3. Overview

The first page. Read it from top to bottom in about a minute.

Block	What it tells you
Top bar	Green **Everything is working**, or amber with what needs a look: a service that did not answer, failed emails or push messages, or an app error repeating.
Needs you now	Six tiles with counts: Identity checks, Reports, Payout accounts, Project requests (with provider applicants), Disputes, Open errors. Each one opens its queue.
Today	New users, new posts, quotes sent, jobs accepted, jobs confirmed, each against yesterday, and people signed in today. Times are Phnom Penh.
New users, last 14 days	A small bar chart. Hover a bar for the day and number.
Totals	Users, providers, identity checked, companies, open posts, confirmed jobs.
System status	A dot for App, Database, Sign-in service, File storage, Email, Push messages and Scheduled reminders. Green is fine, red needs action.
Recent admin actions	The last six things an admin did.

What a red dot means

Dot	Meaning and what to do
Database or Sign-in service	Supabase did not answer. Check status.supabase.com and wait a few minutes. If it stays red, open the Supabase dashboard.
File storage	Uploads such as ID photos and documents may fail. Same checks as above.
Email or Push	At least one email or push call failed in the last 24 hours. Open **Errors** and read “Failed emails and push messages”.
Scheduled reminders	The reminder job has not succeeded in the last 90 minutes. Open **Errors** and read “Reminder runs”.

4. The queues

These are the things people are waiting for you to decide. Open each from the tile on the Overview.

Queue	What to do

Identity checks	Open the request: you see the written details (legal name, ID type, ID number, date of birth, machine-readable line if given) and two photos (the ID and the selfie holding it). Check the details match the photo and the face matches the ID. Choose **checked** or **rejected** and write a short note. The person is told within two working days.
Reports	Read what was reported and open the post or person. Set it to **Reviewing**, **Resolved** or **Dismissed** and add a note. If it is a scam or abuse, also pause the person (section 5).
Disputes	Read both sides on the job. Contact them if you need more. Set **Reviewing**, then **Resolved** or **Dismissed**, with a resolution note both people can understand.
Payout accounts	Compare the account holder name with the person's checked ID name. **Approve** only when they match; otherwise **reject** with a reason. A person can use a payout account as verified only if their identity is checked and the account is approved. Any change by the person sends it back for review.
Project requests and applicants	Requests from the public form and providers who applied to join. Set a status, add a note, and match a request to a provider when you can help.

Every decision you press is written to the audit log with your name and the time.

5. People

The page

- **Stat cards:** people, new this week, new this month, providers, identity checked, signed in over 7 days.
- **30-day chart** of new people, and **Where they are** (cities).
- **Search** by name, role or city, and a drop-down: Everyone, Providers, Identity checked, New this week, Paused. The list shows up to 60, newest first.

One person

Open any row to see: joined date, last signed in, posts, quotes sent, jobs as customer and as provider, confirmed jobs, reviews and stars, reports against them and reports they filed, companies, and their latest posts. A link opens their public profile.

You never see email, phone, address or ID number here. Those stay private. Identity photos are in the Identity queue only.

Pause or resume an account

1. Open the person. At the bottom, type a short **reason** and press `Pause account`.

2. The person can still log in but sees “Your account is paused” and cannot post, quote, message or change anything. Their provider card and public record are hidden.
3. To undo, open the same person and press **Resume account**. They must turn their provider switch on again themselves.

- You cannot pause yourself or another admin.
- Use it for scams and abuse. It is logged with your reason.
- **Limit:** it stops the app. A technical person calling the database directly with their own token is not stopped. A full block needs a login ban, not set up yet.

---

6. Marketplace

Counts only; no private text.

Block	How to read it
Funnel (30 days and all time)	Projects posted → got a quote → quote accepted → work delivered → confirmed. Each line shows the percentage of the line before. A big drop shows where the marketplace leaks. Each project is counted in the period it was posted.
Time to first quote	The middle waiting time in hours. Under 24 hours is good for a small market.
Average stars	With the number of reviews.
Cancel rate	Cancelled jobs as a share of accepted jobs.
Quotes waiting 2+ days	Customers have not answered. A gentle message may help.
Projects with no quote 3+ days	Nobody answered. Consider inviting providers or checking the category.
Jobs that look stuck	Accepted over 7 days with no delivery, or delivered over 3 days with no confirmation. Click a row to open the job and nudge both people.
Busiest categories / Needs more providers	Projects in the last 90 days against providers in that category. Recruit where customers ask and few answer.
Bookings (30 days)	Requests, agreed, declined, expired unanswered, and waiting now. Many expired means providers are not answering within 48 hours.
Cities	Projects and providers by city. “Not set” means no city saved.

---

7. Errors

When something breaks for a person, the app tells you here.

- **Grouping:** the same error is one line with a count, where it happened (page, button or form, background call, phone), who it last hit and when.
- **Alert:** if one error happens 5 times in 10 minutes you get a bell notification and an email. At most once an hour per error, and at most 3 alerts an hour in total.
- **Buttons:** Fixed closes it (it reopens by itself if it happens again), Ignore hides noise, Reopen brings it back. Use the drop-down for Open, Fixed, Ignored or All.
- **Failed emails and push messages:** the last failed calls with the address removed.
- **Reminder runs:** the last 8 runs of the reminder job (every 30 minutes).
- **Kept for 60 days**, then deleted automatically.

Check the alarm. Press Send a test error. You see the error screen, then a line "Test error from Piron Work Space" appears. Mark it Fixed. Do this after any big change.

If an error is a bug, copy its message and page and send them to your developer or to Claude together with what you pressed.

8. Features

A switch for each feature, so you can try something on yourself before anyone else sees it.

Setting	Who sees the feature
Off	Nobody, not even you.
Only me	Only your account. Use this to test a new feature live.
Chosen people	You and the people you add. Use it for a small trial.
Everyone	Released to all.

1. Open **Features** and choose the setting in the drop-down next to the feature. It saves at once.
2. For **Chosen people**, search and pick a person under the feature and press Add. Press Remove next to a name to take them out.
3. A change takes effect on the next page the person opens.
4. The **Change log** at the bottom shows who changed what and when.

The switches today

Feature	Currently	What turning it off hides
Payments tab, invoices and payout account	Everyone	The Payments tab, the invoice pages, the payout account page and their buttons.

Home in three pages: Posts, Professionals, Bookings	Only me until you release it	The three buttons on Home, the Professionals cards with Book, My card, and the Bookings page. Off or Only me keeps the old Services tab and My jobs page for everyone else.

New switches arrive with each new feature, starting at **Off**. Ask for a switch when you ask for a feature. Payments held through Piron Work is not built and has no switch.

---

9. Money

This is **your own book**: what comes in and what goes out for Piron Work. Piron Work does not touch users' money.

Reading the page

- Choose a month in the drop-down (the last 12).
- **Revenue**, **Costs** and **Profit** (red if negative) for that month.
- **Paid between users:** invoices people marked as received that month. It shows the size of the market. It is not your income.
- **Last 6 months** table with a total row.

Adding an entry

1. Choose the month at the top.
2. Pick a **revenue type** (Service fee, Subscription, Paid listing, Advertising, Other income) and a **cost type** (Cloudflare, Supabase, Email, Domain names, Phone and internet, Legal and accounting, Marketing, Other cost).
3. Type the amount in US dollars and an optional note.
4. Tick **Repeats every month** for things that renew, such as hosting.
5. Press `Add as revenue` or `Add as cost`. It uses the matching type.

- **Monthly entries** count in that month and every month after, until you press `Stop`. Earlier months keep them.
- **One-off entries** have a `Delete` button. Deleting is logged.
- **Download CSV (12 months)** gives every entry that counts, month by month, for your accountant.

> This is a simple book, not an accounting system or tax advice. Keep receipts and ask your accountant how to report income.

10. Reports

Monthly owner report

Choose a month. You get one page with four blocks: **People**, **Marketplace**, **Money** and **System and care** (new errors, open errors, reports filed, admin actions). Press `Print or save as PDF` to print only the report, without menus.

CSV downloads

File	Columns
People	Name, role, city, joined, provider, identity checked, confirmed jobs, paused, posts
Jobs	Project, status, agreed price, customer, provider, started, delivered, confirmed
Invoices	Number, from, to, title, amount, currency, status, issued, received

No email, phone or ID number is in any file. The money entries have their own download on the Money page. Files open in Excel or Google Sheets.

11. Audit log

Every admin action in one list, newest first, with who did it and when. Nobody can edit or delete a line.

- Identity checks, reports, disputes and payout accounts decided.
- Accounts paused or resumed (with your reason).
- Feature switches and people added to a feature.
- Money entries added, stopped or deleted.
- Errors marked fixed, ignored or reopened.

Use the drop-down to show one kind. The last 200 are shown.

12. Daily, weekly, monthly

When	Do this	Time
Every day	Open the Overview. Read the top bar. Clear **Needs you now**: identity checks first (people wait up to two working days), then reports and disputes. Glance at System status.	5 to 10 minutes
Every week	Open **Marketplace**: read the funnel, nudge stuck jobs and quotes waiting, note categories that need providers. Open **Errors** and close what is fixed.	15 minutes
Every month	Add revenue and costs in **Money**. Open **Reports**, choose last month, save the PDF and download the CSVs. Skim the **Audit log**.	30 minutes

After a new feature	Set its switch to **Only me**, try it, then **Chosen people**, then **Everyone**. Press **Send a test error** once to check the alarm.	As needed

13. Safety and limits

- **Protect the owner login.** Use a strong password you do not use anywhere else. Log out on shared computers. Anyone with this login sees everything above.
- **Owner only is enforced by the database,** not only by hiding buttons. Other accounts get nothing back.
- **Private details stay private.** Emails, phone numbers, addresses and ID numbers are not shown or exported in the Space.
- **Secrets** (email key, push keys) live in Cloudflare and Supabase, never in the app pages. Never paste them into chat or documents.
- **Pause is not a login ban.** See section 5.
- **Payments through Piron Work are locked.** Holding or moving users' money needs legal advice on National Bank of Cambodia licensing first. Nothing in the Space turns it on.
- **English only.** The Space screens have no Khmer yet.

14. Problems and answers

Problem	What to do
"Not allowed"	You are logged in with another account. Log out and use the owner account.
No chooser after login	You were sent to a page you asked for first. Click the logo to get the two cards. The menu entry also works.
The numbers look old	Reload the page. The Space reads the live database each time.
A red dot stays red	Check Supabase and Cloudflare status pages, then open Errors. If it lasts over an hour, send the dot name and time to your developer.
I did not get an error alert	Alerts need the email key. Press **Send a test error**; if the line appears but no email arrives, check the email key in Supabase Vault.
I turned off Payments by mistake	Features → the feature → **Everyone**. It takes effect on the next page.
I paused the wrong person	Open them in People and press **Resume account**. Ask them to turn the provider switch on again.
A Money entry is wrong	Delete it (one-off) or Stop it (monthly) and add the right one. Both are logged.

Addresses

Part	Address
Chooser	app.piron.tech/choose
Overview	app.piron.tech/admin/space
People, Marketplace, Errors	/admin/space/people, /admin/space/marketplace, /admin/space/errors
Features, Money, Reports, Audit	/admin/space/features, /admin/space/money, /admin/space/reports, /admin/space/audit
Queues	/admin/identity, /admin/reports, /admin/disputes, /admin/payout-accounts, /admin

Releasing Home in three pages

1. Features → **Home in three pages** → **Only me**. Try Professionals, My card, Book and Bookings with a second account.
2. Check the Errors page and press **Send a test error** once.
3. Ask providers to open **Profile** → **My card** and add a price from. Cards without one stay hidden.
4. Switch to **Chosen people** for a small trial, then **Everyone**. The Services tab disappears for those people and its address leads to Professionals.
5. To undo, set the switch back. Nothing is deleted; bookings already agreed stay as normal jobs.

Piron Work is run from Phnom Penh. Questions: **pironbypor@gmail.com**
